

**February 16 meeting notes:**

What is working?

Network stability, student access from home, laptop lab carts, mounted projection units, Infinite Campus, email, internet access to information in the classrooms, technology changes the dynamic in the classroom, in some places the number of labs is sufficient.

What issues are perceived?

Incorporating emerging technology, teaching appropriate use of technology – manners and forms, getting sufficient bandwidth, staff development to use existing technology, lag time at wireless access points.

What do we want?

Build capacity to embrace technology as useful, increase technological capacity to exchange educational content between teachers and students, investigate offering online courses, improve wireless access, make classrooms more interactive, ensure adequate funding to maintain a reasonable replacement cycle for existing technology.
